

~~SECRET~~TTT-60-480  
8 June 1960

TO : (See Distribution)

FROM : Chief, KUCLUB *JK*SUBJECT: General - Operational/Engineering  
Specific - Battery Charging Handcrank Generator - HG-3

1. Forwarded herewith for your retention and appropriate demonstration is a prototype HG-3. This unit was previously described in AEIB #2 dated 8 January 1960.

2. The production model of the HG-3 will be essentially of the same configuration, however, it will differ slightly material-wise through the application of more advanced packaging and production techniques. The production model will cost in the vicinity of \$350.00, and we are thinking in procurement terms of 100 units.

3. We will be extremely interested in your opinion of the HG-3, and in particular, the comment of Project Officers who may have the need for an easily concealable and portable battery charger in their area of activity.

4. Your attention is invited to Section I, para 8, of the instruction manual, which refers to the charging of "lower voltage batteries".
